SYNERGY 3 ANNOUNCED AS 2010 APCO CONFERENCE & EXPO HOT PRODUCT.

Poulsbo, WA (October 1, 2010) --- Watson Dispatch is pleased to announce that Synergy 3 was selected, by committee, as a 2010 APCO Conference & Exposition 'Hot Product' and will be featured as such in the November issue of *Public Safety Communications* magazine.

Michael Wright, VP of Watson Dispatch National Sales says of the merit, "Synergy 3 reflects changes to our console systems that support the 24/7 emergency response environment, specifically the comfort, control and efficiency of the workers themselves. Watson Dispatch will continue to use inspiration from the field as we advance our console designs."

Synergy 3™, launched March 1st 2010, improves console design with state-of-the-art environmental controls and field-tested accessories to enhance the user's experience. Watson Dispatch's product development has been driven by industry standards for durability and flexibility, and ergonomics and environmental comfort-control feedback from emergency-response personnel.

Updated features include transparent upper console segments for enhanced visibility between dispatchers. Optional features include a phone mount, whiteboard, binder storage, CD organizer, and swivel-to-stow cup holder. Each accessory provides work solutions for both right-handed and left-handed users and promotes efficient use of time. To keep the worksurface clear, the new organization tools are mounted on a horizontal cross rail or beneath the console.

Synergy 3 integrates Watson Dispatch's *Total Comfort System*™. The TCS single point interface controls airflow, heating, and dimmable lighting and raises and lowers both the front and back console surfaces. Placing the command of console adjustment at the user's fingertips decreases time-loss between shift changes and enhances comfort for increased worker concentration. A digital readout for height adjustment facilitates setting the height to each user's preference and environmental controls can be positioned anywhere on the worksurface.

Synergy 3 also provides superior technical integration through the use of Techlink. Pre-wired solutions from CPU storage areas to the input platforms make initial installation and future changes quick and efficient.
